

PROJECT IS NEEDED TO RELIEVE ELECTRIC CONGESTION

- Heavy use of the electric grid produces congestion where low-cost electric can't flow freely to consumers. The Independence Energy Connection will add the infrastructure to assist in alleviating the “traffic jam” of low-cost electricity and allow affordable electricity to reach consumers in the mid-Atlantic region.

TRANSOURCE INDEPENDENCE ENERGY CONNECTION PROJECT

Existing regional infrastructure

limits access of residential and commercial consumers to affordable power.

The Independence Energy Connection Project

is like building additional lanes to keep traffic flowing. Adding new transmission lines to the existing power grid allows greater access to more affordable electricity.
